

Tindale Oliver MPO Solutions

Among Tindale Oliver’s specialty areas is metropolitan planning and providing expertise in all aspects of Long Range Transportation Plan (LRTP) development, Congestion Management Process design and implementation, and other planning activities undertaken by MPOs. This includes transit planning, sub-area and corridor studies, transportation data management, transportation disadvantaged program management, and bicycle, pedestrian, and trails planning and project development.

Tindale Oliver has provided services and expertise to numerous MPOs across the state of Florida and beyond. Recently, we were selected by the Oahu (Hawaii) MPO to conduct a comprehensive review and evaluation of its current planning process to resolve a corrective received during a Federal Certification Review. This study will help OahuMPO implement strategies to improve the continuing, cooperative, and comprehensive (“3C”) process among the MPO, its participating agencies, other departments and agencies, and the public.
